

PicPose App Summary

What It Is

- Android app that curates AI image prompts and photography guidance for creators.
- Built with Jetpack Compose and a network-backed content feed.

Who It Is For

- Mobile users who want quick AI prompt ideas and photography tips.

What It Does

- Browse AI prompts and photography guide posts.
- View prompt details and copy full prompts to clipboard.
- Favorite prompts and export all favorites to clipboard.
- See daily tips and featured content on Home.
- Sign in with Google, Facebook, or Twitter.
- Manage profile, settings, and theme preferences.
- Shows in-app ads and supports reward screen navigation.

How It Works

- UI: Jetpack Compose screens with Navigation graph.
- Logic: ViewModels injected with Hilt (Home, Explore, Auth, Settings, etc.).
- Data: Repositories call Retrofit API (base URL in RetrofitClient) with OkHttp caching.
- Local: Room database for favorites/likes/stats; DataStore for settings/session.
- Services: Firebase Messaging for push notifications and deep links.
- Monetization: AdMob/Meta Audience Network via AdsManager in Application.

How To Run

- Open the project in Android Studio and sync Gradle.
- Ensure Android SDK is configured in local.properties (Not found in repo).
- Run the app on an emulator or device using the app configuration.
- Backend/API setup details (Not found in repo).
